
This scale captures how people rate a mobility resource. The scale can be used to understand how well a mode of transport meets various human needs. These are derived from basic needs (Sheldon et al., 2001) and related to mobility.

The instructions can be used to ask about specific mobility resource (e.g., „The use of a private car...“ or „The use of a combined ticket...“). In addition, the instructions can be used to potentially set specific conditions (in the rain, on the way to work).

Important: A ready-to-use version of the scale can be found on the last page of the document.
